The dot product

The diagram illustrates the dot product of two vectors using fruit prices. The first vector (blue boxes) represents quantities: 2 apples, 4 bananas, and 1 cherry. The second vector (teal boxes) represents prices: \$3 per apple, \$5 per banana, and \$2 per cherry. The dot product calculation is shown as the sum of the products of corresponding elements: $2 \times 3 + 4 \times 5 + 1 \times 2 = 6 + 20 + 2 = 28$, resulting in a total cost of \$28.

Multiplying matrices

The diagram illustrates the process of multiplying two 2x2 matrices. The first matrix (left) has elements $\begin{bmatrix} 2 & -1 \\ 0 & 2 \end{bmatrix}$ and the second matrix (middle) has elements $\begin{bmatrix} 3 & 1 \\ 1 & 2 \end{bmatrix}$. The result is a 2x2 matrix (right) with elements $\begin{bmatrix} 5 & 1 \\ 2 & 4 \end{bmatrix}$. The calculation is shown as follows:

$$\begin{bmatrix} 2 & -1 \\ 0 & 2 \end{bmatrix} \cdot \begin{bmatrix} 3 & 1 \\ 1 & 2 \end{bmatrix} = \begin{bmatrix} 5 & 1 \\ 2 & 4 \end{bmatrix}$$

The result matrix is calculated by taking the dot product of each row of the first matrix with each column of the second matrix:

- Top-left element: $2 \cdot 3 + (-1) \cdot 1 = 6 - 1 = 5$
- Top-right element: $2 \cdot 1 + (-1) \cdot 2 = 2 - 2 = 0$
- Bottom-left element: $0 \cdot 3 + 2 \cdot 1 = 0 + 2 = 2$
- Bottom-right element: $0 \cdot 1 + 2 \cdot 2 = 0 + 4 = 4$

Quiz

- Find the inverse of the following matrix. If you find that the task is impossible, feel free to click on “I’m reaching a dead end”

1	1
2	2

Solutions

- The inverse doesn't exist!

We need to solve the following system of linear equations:

$$\begin{bmatrix} 1 & 1 \\ 2 & 2 \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$a + c = 1$$

$$2b + 2d = 1$$

$$2a + 2c = 0$$

$$b + d = 0$$

This is clearly a contradiction, since equation 1 says $a+c=1$, and equation 3 says $2a+2c=0$.
